

HOW TO USE THIS TEMPLATE:

Introduction

The template reflects the steps set out in the PRINCE2 Method and is designed to prompt the Project Manager and help in the creation of the Product Description. There is also a Product Description for the Product Description document at Appendix A of the PRINCE2 Manual.

Loading the file

This template has been produced using Microsoft Word 2003. To use it, load up the file directly from the directory and starting from page 1 follow the prompts in [...] brackets.

Deleting the [...] text

When the template is complete, the Product Description document can be printed and approved.

Prior to printing, you should delete all [...] prompt text.

Saving the Product Description document under its own name

Save the Product Description document by selecting the "SAVE-AS" command; this will avoid overwriting the standard template. You must specify your own Project Directory.

Once your Product Description document is completed check the document against the following Quality Criteria:

- The purpose is clear and consistent with other products
- The product is described to a level of detail sufficient to plan and manage its development
- The Product Description is concise yet sufficient to enable the product to be produced, reviewed and approved
- Responsibility for the development of the product is clearly identified
- Responsibility for the development of the product is consistent with the roles and responsibilities described in the project management team organization and the Quality Management Strategy

- The quality criteria are consistent with the project quality standards, standard checklists and acceptance criteria
- The quality criteria can be used to determine when the product is fit for purpose
- The types of quality inspection required are able to verify whether the product meets its stated quality criteria
- The Senior User(s) confirms that their requirements of the product, as defined in the Product Description, are accurately defined
- The Senior Supplier(s) confirms that the requirements of the product, as defined in the Product Description, can be achieved

3 Identifier

[Unique key, probably allocated by the configuration management method and likely to include the project name, item name and version number]

4 Title

[Name by which the product is known]

5 Purpose

[The purpose that the product will fulfil and who will use it. Is it a means to an end or an end in itself?]

6 Composition

[A list of the parts of the product. For example, if the product were a report, this would be a list of the expected chapters or sections]

7 Derivation

[What are the source products from which this product is derived? Examples are:

- A design is derived from a specification
- A product is bought in from a supplier
- A statement of the expected benefits are obtained from the user
- A product is obtained from another department or team]

8 Format & Presentation

[The characteristics of the product, for example, if the product were a report, this would specify whether the report should be a document, presentation slides, or an email]

9 Development Skills Required

[An indication of the skills required to develop the product or a pointer to which area(s) should supply the development resources. Identification of the actual people may be left until planning the stage in which the product is to be created]

10 Quality Criteria

[To what quality specification must the product be produced, and what quality measurements will be applied by those inspecting the finished product? This might be a simple reference to one or more common standards that are documented elsewhere, or it might be a full explanation of some yardstick to be applied. If the product is to be developed and approved in different states (e.g. dismantled machinery, moved machinery and re-assembled machinery), then the quality criteria should be grouped into those that apply for each state]

11 Quality Tolerance

[Details of any range in the quality criteria within which the product would be acceptable]

12 Quality Method

[What kinds of quality method – for example, design verification, pilot, test, inspection or review – are to be used to check the quality or functionality of the product?]

13 Quality Skills Required

[An indication of the skills required to undertake the quality method or a pointer to which area(s) should supply the checking resources. Identification of the actual people may be left until planning the stage in which the quality inspection is to be done]

14 Quality Responsibilities

[Defining the producer, reviewer(s) and approver(s) for the product]
